

Place **TEST Sticker** HERE

if the patient or a parent:

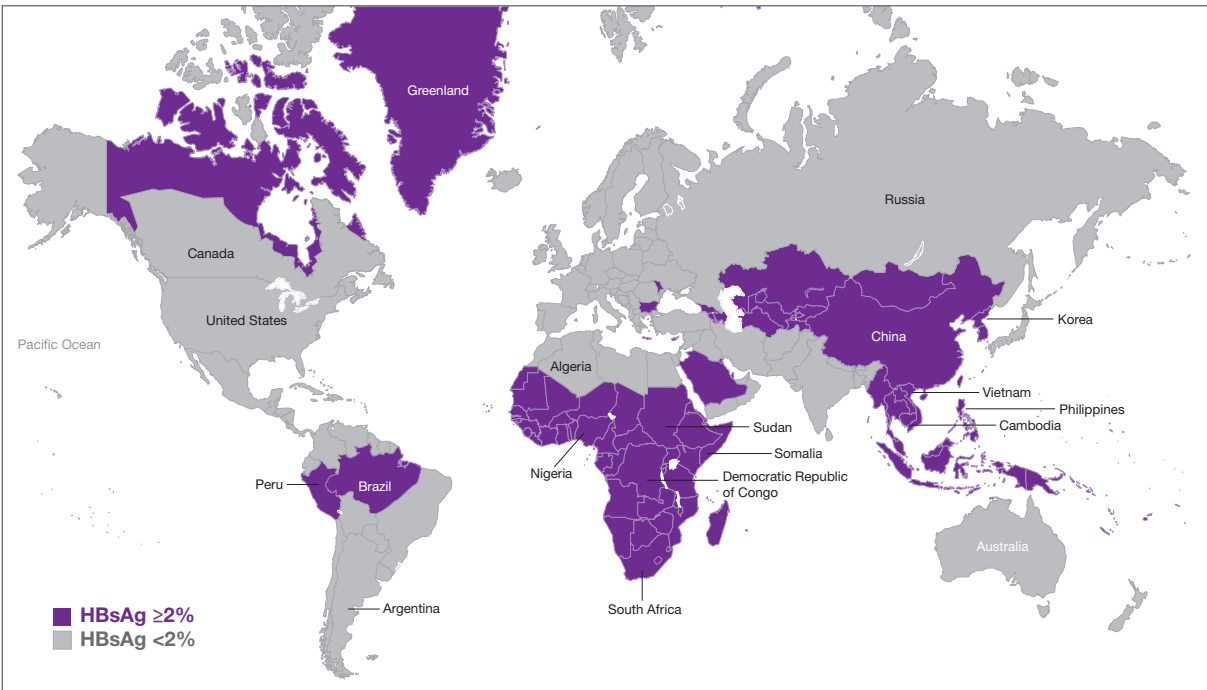

- Is from a country shaded in purple
- Was not vaccinated
- Received fewer than 3 shots or is not sure

Are You at Risk for Hepatitis B?

PATIENT NAME _____

Answer a few simple questions and you can find out.

- Is your family from one of the purple countries on the map? Yes No

Centers for Disease Control and Prevention. Recommendations for identification and public health management of persons with chronic hepatitis B virus infection. *MMWR*. 2008;57:1-20.

- Have you been vaccinated for hepatitis B infection? Yes No
- If Yes, how many shots did you receive? 1 2 3
 No, I was not vaccinated Not sure

WHY WE ASK

- People from any country can get hepatitis B infection. But hepatitis B infection is most common in the purple countries on this map, especially countries in Asia, the Pacific Islands, and Africa
- If you or one of your parents was born in one of the countries shaded in purple, you are at risk for hepatitis B infection. You need to get tested to protect your health
- People with hepatitis B infection have a high risk of getting serious liver disease, including liver cancer, cirrhosis, and liver failure. However, effective and safe treatments are available that can prevent serious liver disease in people with hepatitis B infection. If you do not have hepatitis B infection, you can get vaccinated, so that you will be protected for life
